 - When mounting a G2 Series liftgate on a 2011-2014 model year Chevy/GMC 2500/3500 pickup, the liftgate will need to be positioned 1/2” to 1” rearward to avoid the factory hitch. A filler strip may be needed to fill the gap (not included in the mounting kit).
 - This application positions the liftgate up to 5” rearward to accommodate the factory hitch. A filler strip is included in the mounting kit to bridge the gap.
 - Not compatible** with bumper mounted ball hitch, must have receiver hitch to be compatible. WT trim without trailering package has a bumper mounted ball hitch only.

Numerous aftermarket hitch brands are available, but ACME Hitch® has a complete chart for Tommy Gate applications that are compatible with their respective hitches. Visit tommygate.com for more information.
